Conclusion & Questions

Misty

Idea and Goal

- Children with Autism
- Misty expresses emotions
- Teach children to recognize

Milestones and KPI

Milestone #1

Start interaction and explain game to the child.

KPI 1.1: Initiate the contact in the right way: detecting the person and asking whether they want to play a game.

KPI 1.2: Explain the game with detailed instructions.

Milestone #2

Showing and explaining emotions.

KPI 2.1: Changing Misty's expression, showing movement of arms, tilting head, and changing LED color.

KPI 2.2: Showing and explaining the emotions before the actual game.

Milestone #3

Recognizing the emotions shown by the child.

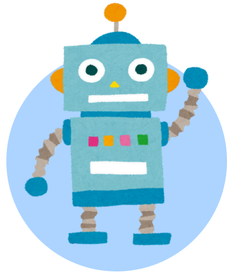

KPI 3.1: Provide feedback to which emotion the child shows to Misty through the image.

KPI 3.2: When answered wrong twice, explain the facial expression and moving on with the game.

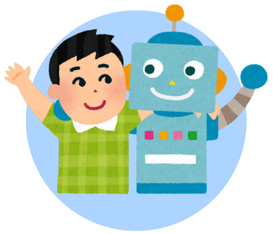

Milestone #1

Person recognition

Game explanation

Conversation with the user

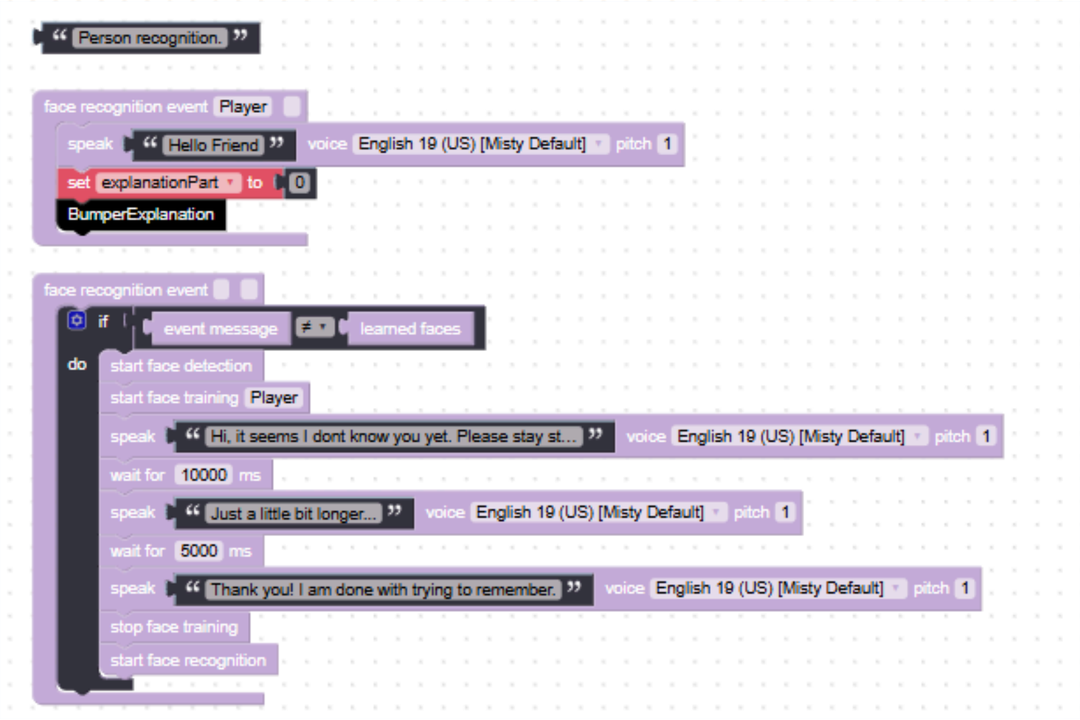

Challenges

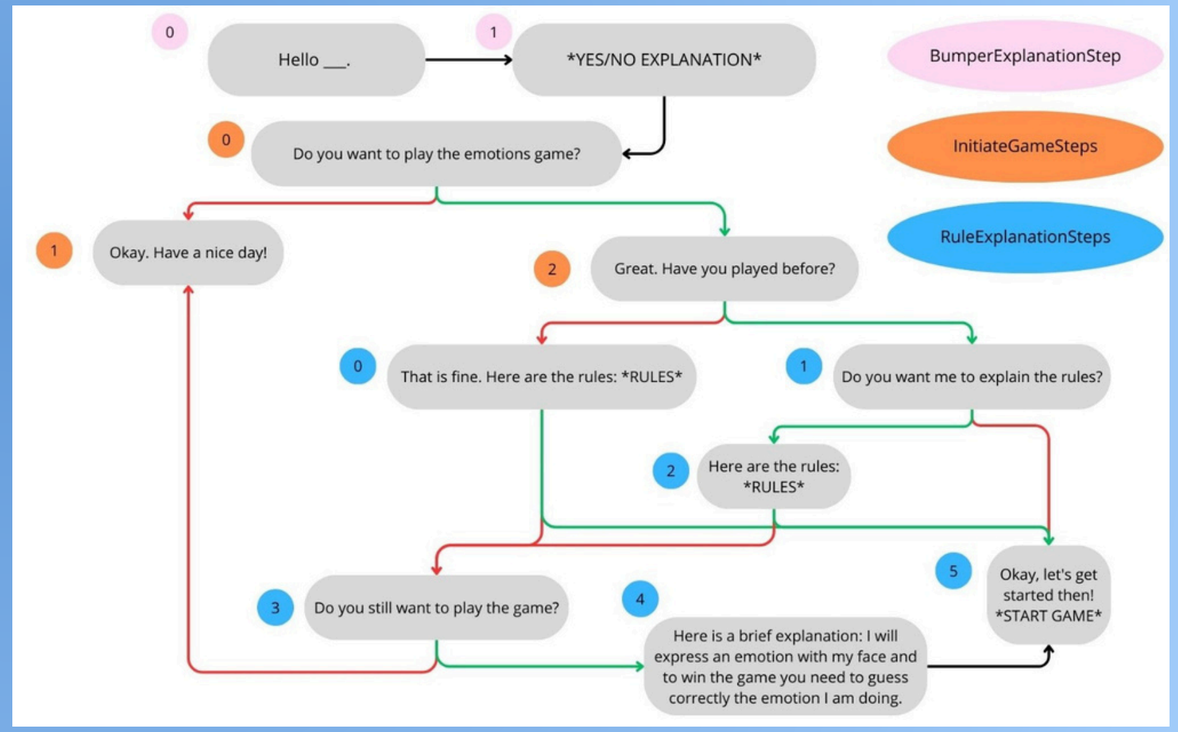

Getting used to program

Speech recognition

Imitates
emotions

Future Extensions

Speech recognition

Allow conversations through voice recognition and speech instead of bumpers.

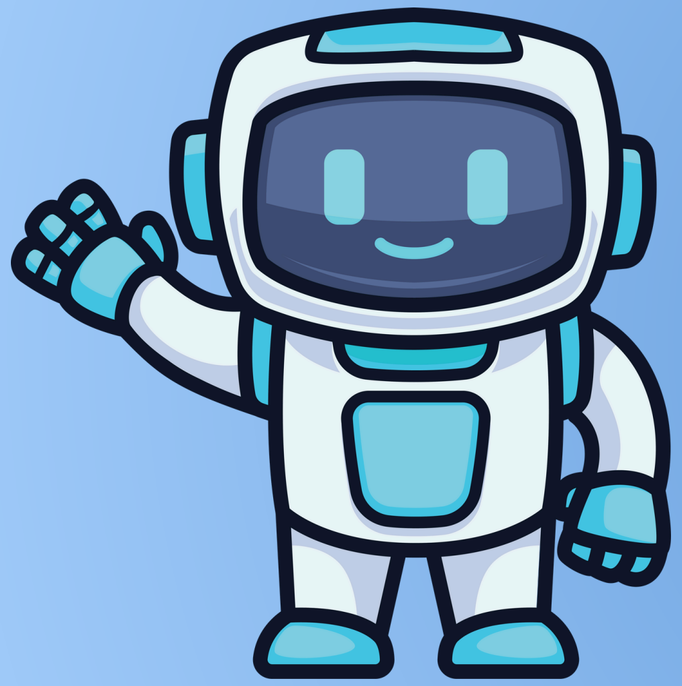

Emotion recognition

Interpret children's emotions through facial recognition instead of through pictures.

Reverse Game

Have the children express an emotion and Misty has to correctly recognize the emotion.

Thank you very much!
